The toughest prison sim in the yard is back to serve its 3rd consecutive sentence - combining classic moments from the OG with the best aspects of 2D, while putting out a few hits of its own!

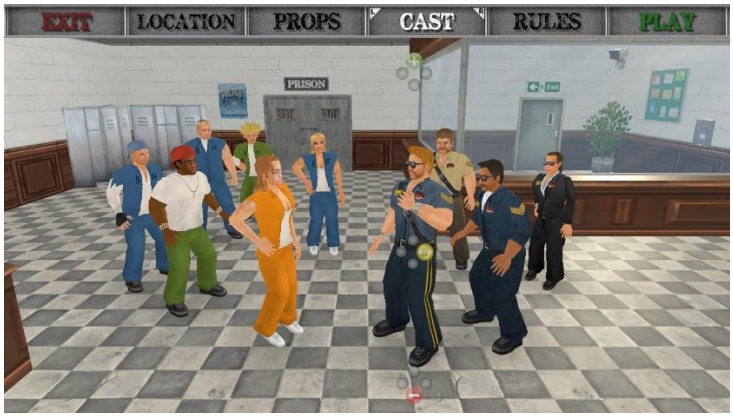

Controllers

Any controller could be connected to a PC, so it's important to help the game distinguish between Xbox and Playstation button maps. This screen appears automatically when you boot up with a controller for the first time, and your preferences will be saved, but you can always seek it out manually in the "Controls" options (or by simply pressing the **C** key at the titles). **For best results, please ensure any controllers are connected BEFORE launching the program.** Also note that Windows 10 is assumed, so drivers older than Xbox One may not be recognized. You can use the "Calibration" option to map the buttons for any controller that isn't automatically recognized.

Menus

Any device with touch-screen or a mouse can instantly access any option, pressing either side to change its value where possible. When using a controller, it is the directions that highlight an option and the ◦• or •◦ buttons change its value, with •◦ used to go back in most situations **(although this command may be reversed on Switch!).** You can instantly reset any value by pressing either thumbstick as a button, or by clicking the middle mouse button. On screens with multiple tabs or categories, use the **L** or **R** shoulder buttons to browse through those. At the character selection screen, the left or right triggers can be used to browse pages while the shoulder buttons change categories. Upon using a controller on PC menus, the mouse cursor will be hidden until you click to reclaim it. **The control method you use to proceed will continue to be used in the game itself, so only click through on PC if it is your intention to use keys!**

Fight Scenes

Upon proving you can complete a sentence properly, you gain access to a special "Fight Scene" mode – where you decide WHO fights WHERE and with WHAT! Here there are some additional commands to be aware of. At the "Cast" screen, the **+** icon (or ⁘ button) will add a random character to the scene whereas the **-** icon (or back button) will remove one. If you hold either command for a second, you will be transported to a screen where you can hand-pick ALL participants by name. Otherwise, back in the real-time 3D setup, tapping an existing character will allow you to replace them with another of your choice. Hold the command with a direction to reposition them. Under "team" rules, placing characters either side of the centre separates them into rival factions (i.e. cops vs criminals) – otherwise individuals fight for themselves in their default role. Combatants are eliminated when killed, knocked unconscious, or forced to submit from a hold. When you are ready to proceed at the "Play" screen, each controller can now use their directions to choose a character and press any button (except back) to commit to them (or click them directly). While there is still time, pressing the back button will cancel this choice, or opt out of the game entirely if pressed again. Controllers may still join a game once it has started by pressing the **+** button to opt in. They will then be randomly assigned a character which they can change by holding one shoulder trigger while pressing the other. Eliminated players will get to control somebody else left in the fight wherever possible.

Editing

Upon proving you can complete a sentence legitimately, you also unlock access to an inbuilt "Editor" where you can save your changes to every character in the city to make it your own! This occurs in a more limited form at the beginning of each game, or by accessing wardrobes, mirrors, or hairdryers wherever they appear during the game. Each character has 3 separate outfits – so make sure you are editing the intended one

by selecting it first from the "Costumes" home page. You can always return to a tab's home page by selecting the tab again (or pressing the back button). If one costume should resemble another, you can clone the existing one by holding over the corresponding arrow (or either shoulder trigger). You can even copy entire outfits over from other characters via the "Cloning" tab. Unique looks are achieved by combining different "Flesh" layers with different "Material" choices and other accessories layered over those. This can be fiddly at first, but ultimately allows for the most creative freedom. Wherever you see a colour palette, navigating to the left (or clicking it directly) will change the RGB values of the last layer you interacted with. To make multiple changes more quickly, you can "Copy" and "Paste" the same colour by pressing those commands (or the left/right shoulder triggers respectively). **Please note that any changes you make to prison colours may be overridden by the colour of their block.** To inspect your changes, you can swipe the model directly or use the right stick to rotate them.

Universes

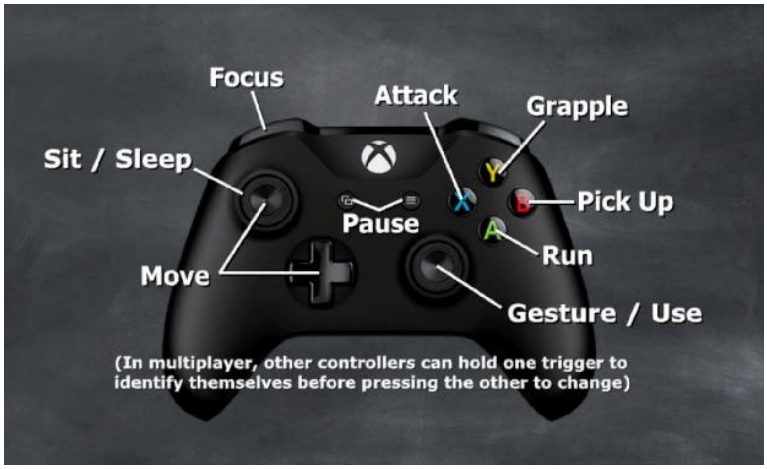

The game's hundreds of characters are liable to get jumbled up over time, in which case you can head to the "Universe" options to restore the defaults or a backed up universe of your own. **It is better to get in the habit of doing this in between saved games to prevent any unintended consequences, as the active star character will not be affected by any changes around them.** Note that you must press these options TWICE to avoid doing so by accident! Don't worry about losing any characters you have unlocked, as this will be preserved separately along with any other achievements.

Save Data

If you'd like to back-up your data across different installations (or even different devices!), the "Save.bytes" file may be accessible on sufficiently open platforms:
PC: [User]\AppData\LocalLow\MDickie\ Hard Time III\Save.bytes
Android: InternalStorage/Android/data/com.MDickie.HardTimeIII/files/Save.bytes
Switch: Hard Time III / Data Management / Transfer Your Save Data

Resolutions

The game is designed to start fullscreen and high resolution by default, but you can switch to windowed mode at any moment by pressing **CTRL + W** (as well as the standard **ALT + ENTER**). **Please note that resizing the window in real-time may have undesirable results, so consider exiting the current screen at the nearest opportunity (or restart the game entirely).** After resizing the window, going fullscreen again will use that resolution – which may improve performance on lower specs.

Controls

The game will explain many commands as you progress, but the basic controls are as follows for most controllers:

LEFT STICK = Movement (double tap to dash)
LEFT STICK BUTTON = Kneel > Sit > Sleep (or dismount steed)

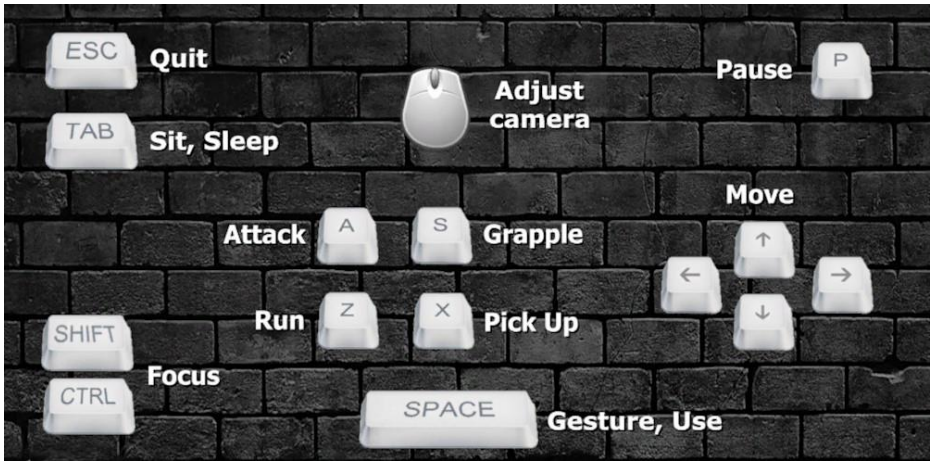

= Attack (on its own to aim low, with a direction to aim high).

= Grapple / Release / Dismount steed

= Run (without a direction to charge ahead, double-tap to jump)

= Pick-Up / Drop (with a direction to throw, hold to lift overhead)

RIGHT STICK = Interact with props/scenery, initiate conversations (arrest in a grapple)
RIGHT STICK BUTTON = Swap hands
SHOULDER BUTTONS = Switch focus (once with a direction to find nearest, repeatedly to browse all, hold to disengage)
SHOULDER TRIGGERS = Hold one to identify yourself in multiplayer and press the other to control a different character
START / SELECT = Pause
D-PAD = Adjust camera

Keyboard

If no controllers are connected, the keyboard is available as a last resort:
CURSORS = Movement (double tap to dash)
A = Attack (on its own to aim low, with a direction to aim high).
S = Grapple / Release / Dismount steed
Z = Run (without a direction to charge ahead, double-tap to jump)
X = Pick-Up / Drop (with a direction to throw, hold to lift overhead)
SPACE = Interact with props/scenery, initiate conversations (arrest in a grapple)
SHIFT / CTRL = Switch focus (once with a direction to find nearest, repeatedly to browse all, hold to disengage)
TAB = Kneel > Sit > Sleep (Control a different character where possible)
P = Pause
ESC = Quit / Skip
CTRL + W = Toggle windowed mode
MOUSE = Adjust camera while clicking in the centre of the screen

Combinations

- Press ATTACK + RUN together to launch a powerful attack.
- Retreat from an opponent to increase your chances of blocking.
- Hold RUN while carrying furniture to avoid turning with it.
- Hold the PICK-UP command to try to lift furniture over your head if you're strong enough!
- Hold RUN + PICK-UP together to combine objects (including reloading).
- Hold TAUNT + PICK-UP to deliberately set fire to a small object.

Grappling

- Press GRAPPLE again without a direction to release a hold (or with a direction to send them running that way!).
- Press the ATTACK, RUN or PICK-UP commands with any direction (or none) to execute the corresponding move from the character's move set.
- Continue to use directions to move or turn wherever possible.
- Hold the ATTACK command upon impact to transition into another hold wherever possible.
- Further transitions occur based on the "Skill" levels or size difference of those involved, and the direction each is struggling in. In some situations, each person may be able to continue throwing strikes with the ATTACK command.
- Holding the GRAPPLE command during an incoming attack makes it more likely that it will be parried or countered.
- Hold GRAPPLE while on the ground to increase the chances of instantly rising up into a move!

- Use the FOCUS command in a grapple with or without a direction to change your position (such as turning from front to back or vice versa).
- Use the TAUNT command to apply a hold wherever possible (then continue to hold it to arrest or interrogate the victim).

Shooting

This game introduces shooting for the first time in 3D. Like striking from a distance, simply holding the ATTACK command will begin to aim and releasing it will fire a round with relative accuracy. Some weapons such as a machine gun or flamethrower will fire continuously instead of using the hold & release method. If you were holding a direction BEFORE you begin you shooting, you will continue to move while shooting (with less accuracy). If you take a moment to stand still BEFORE shooting, you can then use the directions to fine-tune your aim. Notice that you can also fire weapons while sitting down, etc. By default aiming assumes that up is up and down is down, but this can be reversed in the Options – along with the camera looming closer over your shoulder to "assist". In most cases, simply focusing on an opponent and firing will automatically have the desired results. It is not my intention to make a whole other FPS game where shooting is perfected by a crosshair. Instead, the game favours a "naturalistic" system that allows you to fire at ANY moment – so don't forget to keep pulling the trigger whenever you need to, and beware of enemies that have not been disarmed! Each weapon has a limited amount of ammo, but the crafting system allows you to reload if you can find any relevant objects. You've only ever run out of ammo when you've run out of ideas!

Adrenaline

The thinner yellow meter under a character's health indicates their mental health. When this is filled by positive experiences they may enjoy an "adrenaline rush" – where they temporarily become 10% stronger in every respect, and any move they trigger will either be a special move or a stronger version of an existing move (such as a hold or attack). Inversely, **if your spirit is exhausted your character will have a nervous breakdown where you literally "lose control" of them!**

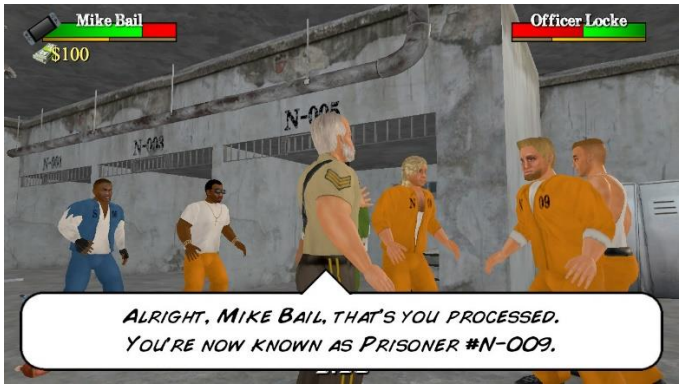

Multiplayer

Other controllers can join the action at any moment by pressing the **START** button to opt in! They will then be randomly assigned a character on the scene, which they can identify by holding one shoulder trigger before pressing the other to change. If they are an ally they will follow the star to the next location, whereas rivals will spawn at a distance. **The assigned characters will remain until they disconnect or you exit to the titles.**

Camera

To make the most of this 3D experience, you may need to fine tune the camera to your liking. You can access these options at any time via the in-game pause menu by pressing your controller's **START** button, the **P** key, or simply touching the clock itself. You can also adjust the camera in real-time by clicking in the centre of the screen with a mouse, or pinching/swiping the centre of touch screens. By default, the main game mode is focused only on the star. You can disengage from looking at other people by repeatedly walking away from them. Multiplayers who feel overlooked can identify themselves by holding either shoulder trigger, or have the scope changed to include them at all times. **Paying customers can unlock additional camera privileges such as a special "Smooth" 60fps speed and colour settings that can be faded to resemble CCTV footage!**

Schedule

This game takes place in seamless real-time, challenging you to take responsibility for every minute of every day – from the moment you wake up in your own cell to the moment you make your own way back to it! This tends to be 8am to 8pm, but wardens reserve the right to adjust the schedule – as well as which cell or block you belong in. You are not expected to sleep outside of these hours, and will be nagged into getting out of your cell and on with your day. Upon serving every day of your sentence, you will be escorted back to civilian life – but even this can go up or down depending on your behaviour. You can save your progress by exiting to the titles at any quiet moment, otherwise there will be regular saves in between scenes.

Health

Your **green** health meter is gradually drained throughout the day – especially if you choose to run everywhere instead of walking! The longer your health has been low, the harder it is to restore fully (as shown by an **amber** limit) – but eating & drinking can restore energy in small chunks. Getting a good night's sleep on a comfortable bed is the most reliable way to restore health, and also a good way of passing the time if you want to fast forward through uneventful periods. You can try to sleep at any time by pressing the left stick as a button, the TAB key, or tapping the health meter. As in real life, it is difficult to sleep if you are full of energy – so spending it in order to sleep should be part of your routine. Many activities and forms of exercise literally spend your health and turn it into improved attributes. Other vices such as cigarettes & alcohol can also turn your good health into good spirits, with an additional risk of becoming sicker than you intended! Upon losing your health entirely, you will collapse onto the floor and fight to regain consciousness. If you are not lucky enough to do so, you may wake up injured in a hospital – otherwise your life could end entirely. You can also choose to go to the hospital to seek other health benefits – such as surgery to heal injuries or therapy to boost attributes.

Attributes

Each character consists of the following physical attributes, which are only as good as their health and could be up to 25% weaker when tired:

- **Reputation** is how respected (or feared) you are by others and influences how likely you are to get your own way with them. Accomplishing tasks or winning fights will improve your reputation, whereas failing or being subordinate will damage it.
- **Strength** determines how much your attacks hurt and how easily you can perform power moves. A certain level of strength may also be required to lift heavy objects. It can be trained by lifting weights.
- **Skill** determines how quickly and easily you can accomplish tasks such as crafting or countering moves in combat. It is improved by mastering tricky activities such as sports or instruments.
- **Agility** influences how fast you move, how quickly you climb, and how far you can jump. It also determines your ability to execute or counter acrobatic moves without stumbling. It can be improved by climbing, gymnastics on the mats, or running laps around the gym/yard.
- **Stamina** determines how quickly your health goes down throughout the day and how much is recovered by sleeping. It can be trained by running laps in the gym/yard or swimming in the pool.
- **Attitude** is a more positive version of your "reputation" for doing the right thing or not. Accomplishing tasks and co-operating will improve your attitude, whereas letting people down or being disagreeable will damage it.

Conversations

Other people will regularly engage you in conversation to either remark or ask you a question, where you typically choose a positive or negative response. To do this, you simply tap the line of dialogue you wish to use or highlight it with a direction and press the relevant button. In multiple choice situations, you can also press either side of the dialogue to change it before committing. Instead of waiting for the drama to come to you, you can initiate some conversations yourself by looking at someone and gesturing towards them! If you bother people too much it will damage your attitude, and being rejected will damage your reputation – so it's like a currency that you spend to get your own way. A more aggressive approach is grabbing someone and then holding the command – where intimidating characters are more likely to get their own way at the expense of the relationship. In the case of police officers, this is how arrests are made.

Relationships

Harming people or disobeying them will turn them into enemies, whereas being agreeable and co-operative allows friendships to develop. Every time you please someone, the relationship also has a chance to become romantic – with hugs & kisses that bring health & happiness to every interaction (so long as you're not witnessed by somebody else who might be jealous!). You can also seek these relationships through successful dialogue. Allies are key to surviving fights, as they will rush to your aid if they can see clearly enough. For this reason, it is equally important to know if somebody is well-connected before you start a fight with them. Gangs are especially defensive and loyal. Becoming part of one offers enhanced protection, but also requires your unfailingly loyalty when asked to do something. You can attempt to start and expand your own gang via the dialogue system – at which point you can then head to a wardrobe to choose a name and other details such as a unique greeting!

Crime & Punishment

There are dozens of crimes that you can be accused of if they are witnessed by an officer (or an especially vindictive peer). Even if you think you got away with something, it may only be a matter of time before the police build a case against you. These may escalate from warnings and beatings to a full-blown arrest warrant where sirens blare and every officer is alerted to hunt you down! Upon being arrested, your case is presented to a judge who may or not agree with the charges. If you are convicted there are numerous punishments to endure – from physical limitations to fines and sentencing.

Finances

Inmates go into prison with a small amount of money to spend on daily necessities such as cafeteria food. It is then possible to top up your credit by accomplishing tasks, sweeping floors, painting art, fixing furniture, crafting objects, or trading possessions. Prices are subsidised to keep them lower in prison than they would be in the outside world. Upon being released, you may find that you are also charged with anything you walk out of a store with! Working as a police officer is the most lucrative role in the city, where you are paid for successful convictions and helping to solve other cases.

Fashion

You can spend money on costume changes by accessing a wardrobe wherever they appear. The hairdryer is also a unique way to adjust your appearance on the move. In prison, there are certain basic outfits that are designed to be painted the colour of the prison block. Deviating from this too much will attract criticism from the wardens – especially if you attempt to impersonate one! Otherwise, there are certain "fashions" that you may want to keep up with to preserve your reputation. Every day, something becomes fashionable or unfashionable so you may want to dress accordingly.

Forbidden Doors

You can try to access most doors by simply walking against them. For prisoners and civilians, some doors may be inaccessible (unless you have a key!). Shared facilities such as the hospital or courtroom only allow you to exit to the domain where you are allowed to roam. Other venues may charge a small fee to let you in – such as the various forms of transport that allow you to quickly access other locations. Upon being released, there are a variety of places to call home and you will only be allowed through that door on the street – so it's important to pay attention to your address whenever other people mention it! Until you are familiar with the city, look out for signs that indicate where a door or path leads. You can also check your in-game map at any moment or in between scenes. You may even discover secret shortcuts that aren't on any map! The city is still under construction and will be growing all the time…

Further Reading

There's more to this game than I could ever explain here, so I hope you enjoy figuring some things out for yourself! Or you can keep an eye on social media for more hints and discussion:

Version History

v1.1.6

- New weapons include: cricket bat, hockey stick, golf club, shoe, axe, pick axe.
- A crowbar can be used like a key to access locked doors!
- Capes & collars as new types of headwear.
- New female face texture at #35.
- More hairstyles are kept under hats correctly.
- Slight changes to the default characters.
- Jumps can gain a little more height if you hold the button.
- Improved AI attacks at the correct range.
- Improved AI for getting around the far sides of the police yard or prison yard.
- Cars may automatically beep at people who are in the way.
- The intro more accurately describes your lockdown as "between 10pm and 8am" instead of the other way around.
- People do not try to talk across different rooms in the house.
- Tethers are removed from dead or otherwise inactive characters.
- Alternate "Sure Shot" poster in the trailer.

v1.1.5

- Enhanced compatibility with the latest versions of Android (15).
- New hairstyles at #17-20 and new textures on most body parts (wrist bands are rendered BELOW elbow pads).
- Most lockers can now be used like wardrobes to trigger in-game costume changes.
- On a controller, you can deliberately lash out behind you by holding the FOCUS command (shoulder button) while attacking (without a gun).
- Missing limbs cannot be used in crush attacks.
- New “Random” camera regularly gives you a unique view.
- Touching virtual buttons after swiping the middle of the screen no longer confuses the camera.
- You can sleep in any chair if you sit still long enough.
- Dead bodies don't sell the effects of cold when slumped in a chair.
- Gang members accompany you more often.
- Partners are not referred to as "family" members, and gangs are described as "your gang" until you choose a proper name.
- Turning down partnership offers no longer affects your stats by more than 1%.
- Refusing to step down as a gang boss has the correct dialogue.
- Wardens aren't immune from having their strikes parried.
- Objects automatically swap hands more often - especially if they are more useful in the other hand.
- Improved logic favours the most useful prop (i.e. eating!) in each hand and animates it properly.
- Undiscovered characters remain hidden in the "Hall Of Fame".
- AI is less likely to jump near (on!) friends.
- Dialogue is no longer delivered until the speaker has fully entered the room.
- Gore correctly originates from fists that are wrapped in chains or metal.
- Crafting is easier if you're on that mission, and reloading guns also counts.
- Guns have less ammo and reload more often to prevent spamming.
- Pinning predicaments end in a hold wherever possible.

- Riding a horse into a new location advances your position out of the doorway.
- Improved logic on window falls keeps them facing the right way.
- Improved access to the jukebox in the bar.
- Improved camera logic stays the correct side of the train in the subway.
- Objects that smash in your hand are no longer treated as if they're still there!
- Improved accuracy on pick-up requests when rising off your knees.
- You can grapple slightly earlier when rising off your knees.
- Posters reference more of my own IP than anybody else's.
- Animals are now optional.

v1.1.4

- Switch 2 users can activate the full 1920x1080 resolution in handheld mode (there's not yet any way to prohibit Switch 1 users from doing so, but please don't expect it to run smoothly!).
- The map transitions between scenes are optional for paying customers (but remain strongly recommended if your device cannot load scenes instantly!).
- Character outlines are now optional.
- Characters are added/removed to Fight Scenes as quickly as you can tap the button, whereas holding it now takes you to a screen where you can hand-pick all characters by name.
- Nervous breakdowns once again cause you to "lose control" of your character.
- Robots feel the cold 50% less than a human.
- Surviving as a cyborg cop is rarer.
- Fixed an issue that prevented backpacks being worn from scene to scene.
- Fights can no longer end from exhausting yourself after your own move.
- Cannot catch objects while handcuffed.
- Improved delivery of a rare betrayal storyline.
- Improved AI is better at finding alternate routes.
- Being underwater makes you 25% colder.
- Cars are parked properly in Fight Scenes.
- Selecting the wrestling arena for a Fight Scene now shows the ring.
- New female flesh at #16-18 and new male flesh at #22-23.
- New head shave at #18.
- Adapted the timing of floods for 60fps.
- Ironically, the game console prop is available on every platform except Switch.

v1.1.3

- PC users can increase the population to 200% for twice as much content in Fight Scenes! On PC, characters are added/removed as quickly as you can tap the button - whereas holding it now takes you to a screen where you can hand-pick all characters by name. This function can be accessed instantly with a middle mouse click, and right clicks instantly remove a specific character.
- Fight Scene camera preferences are saved & restored for next time.
- New "Extended" particle FX option takes longer to remove splatters or eliminated opponents.
- Character outlines are now optional under "Display".
- Fixed an issue that may have caused extra controllers to not have their meters displayed.

- More intuitive target selection is more interested in those nearby (in the direction you hold) instead of randomly browsing through every single character, and dead opponents are more likely to be disregarded.
- More assertive AI is better at judging ranges in combat (especially with weapons), and considers jumping more often to get around furniture.
- Swinging weapons can become entangled (relative to the "Skill" and timing of the defender).
- New falling animations include slumping forwards or backwards against a wall.
- Lots of new gestures.
- New Middle Eastern headwear at #46.
- New female singlets at flesh #14-15.
- Slightly improved camera logic to peer in/out the police station car park.
- Alternate left-handed slap and lower slaps with either hand.
- More relevant transitions from a front facelock (such as suplexes and DDTs).
- Dropping objects from a crouching state no longer attempts to hand them over.
- Furniture can no longer be thrown through the far sides of a window without smashing it.
- Needing the toilet distracts you from attacking/grappling.
- The hands you attack with can be scarred with less risk of actually being severed.
- People with no arms favour kicks, etc.
- Having no arms makes it harder (but not impossible) to get back up to your feet.
- Missing arm limbs increase the chances of falling while climbing.
- No shivering animation while sleeping.
- Joining a gang changes your costume in real-time.
- Water is bluer and less transparent.
- Flame throwers render better at shorter distances and withdraw more slowly.
- The jury reacts to the prosecution & defence as well as the verdict.

v1.1.2

- New "Partner" relationship status follows you from scene to scene wherever possible. You can approach anybody about partnering with you if they don't ask you.
- Cold outdoor weather damages your health more rapidly, as indicated by a discoloured health meter and a shivering animation. This can be offset by the heat of fire, which also scores a health bonus when sleeping!
- The command for deliberately starting fires has switched to PICK-UP + ATTACK instead of taunt (think of "striking" a match!).
- You can deliberately set fire to ANY flammable object nearby instead of just the one you were aiming for - including large furniture!
- Chains can be used to tug the other person closer to you if they are too far away to grapple! Spamming it can backfire depending on how much stronger your opponent is.
- Lying grapples are more likely to continue to the head or legs when holding a direction (or during an adrenaline rush so you can rise up into your finisher!), and only ever trigger an instant hold WITHOUT a direction.
- Holds are more likely to fall apart if the necessary limbs are missing!
- Skateboard impacts risk falling over.
- Guns can't be blindly fired by grapplers where the attack command is reserved for moves.
- Slightly improved logic when deciding whether to shoot or swing a weapon at close range.

- Surviving death in hospital halves your bank balance.
- You are only charged for objects you walk out with if you have enough money.
- Improved AI doesn't risk following a friend if they are driving vehicle!
- Improved camera logic either side of the fence in the prison yard and T-junction.
- Improved landings when jumping on scenery.
- Slightly improved swimming physics.
- Robotic sound FX are slightly quieter.
- Fixing your own bed/toilet is not a virtue you can be paid for.
- Inheriting an existing character leaves their stats intact.
- Lots of new gestures include: "Cero Miedo", "3 Point Turn", "Samoan Wave", "Throat Finger", "Blow Kiss", "W Sign", "L Sign", "Bicep Kiss", "Shush", "Here Comes The Boom".

v1.1.1

- New electric taser has a short range but is good for stunning opponents instead of killing them!
- Batteries can be used to reload tasers - or inserted into any other gun to fire electricity!
- Improved flame thrower and fire extinguisher effect.
- Costumes change in real-time instead of waiting for the next scene.
- Characters are highlighted by outlines when casting fight scenes or changing controls.
- Slightly improved automatic aiming when looking up or down.
- The camera only assists aiming in single player mode.
- Moving away doesn't disengage from a target while aiming.
- Offspring from the same mother/father are correctly identified as siblings.
- Correct dialogue for cancelling a conversation you started.
- Missing limbs are not restored every time you start a new game.
- Missing limbs reduce a character's weight.
- Objects can be stacked on the shelves of more lockers.
- Right clicks can be used to quickly browse options backwards on PC.
- Middle clicks can be used to instantly reset an option.

v1.1.0

- The amber health drain is now optional (and turned off by default) - which makes you more responsible for becoming tired enough to sleep through the night.
- Vacant gang leaders are replaced by another member, but your active reign is less likely to be replaced without warning.
- Correct dialogue for denying you're part of a gang, and leaving risks criticism from other members.
- Defeated opponents can be offered a chance to survive by joining a gang.
- Gang members can be questioned about their affiliation.
- Syringe liquid is drained correctly.
- Objects in your cell are more likely to be considered your property instead of disappearing for no reason.
- Non-existent moves cannot be "fashionable".
- Prevented illogical move transitions during an arrest.
- Wanted criminals are more likely to resist arrest upon being grabbed.
- Improved logic when copying costumes between genders.
- Improved consistency in how severed limbs heal.
- You can’t be asked to lose/gain weight if your stats leave no room for improvement.

- Backing out of restarting no longer confuses the game in progress.
- Missing limbs reduce a character's weight.

v1.0.9

- Less passive health drain making you tired towards the end of the day, and an additional amber meter makes the limit visible.
- Medical kits and syringes help you restore health/spirit more quickly.
- New crafting recipes include combining liquids with blades/tissue to create syringes/medikits.
- New "Trailer Park" residential area east of the junction offers an alternative address to stay! This is automatically assigned to anybody who is out of prison.
- The existing house interior now has more posters, a phone on the wall, and a sink in the bathroom to wash away scars.
- Improved logic distributes vehicles around the map more evenly.
- "Fight Scene" prop options now include a random selection of guns, food, or sports.
- Lots of new costumes include "hi viz" work gear.
- New headwear includes a firefighter helmet, wizard/witch hat, and an alternate crown/tiara.
- The new "Transparent 4" hairstyle is now affected by variations.
- New family of moves at the front includes various "Alabama" slams and "Dead Head".
- New family of moves at the rear includes various "Wheelbarrow" slams.
- New flying front move includes "Block Buster".
- New "Head Snap" move at the ground.
- Wider variety of handshakes that you can choose in the "Gestures" section to make gang greetings even more unique (although your choice may not always override the choice of the other person).
- Slight changes to the default characters reintroduces the "Suns Of God" gang.
- New storylines include conspiring about who the leader of a gang should be! Only this individual may change the name of the gang or its other unique qualities such as greetings and dress codes. They cannot be set missions by other members, but have an increased chance of success when demanding money from them.
- Gangs can form alliances or declare war on each other!
- Defeated opponents can be offered a chance to survive by joining a gang.
- Pregnancies can be hinted at by other characters before they happen.
- Mysteries are only solved when the star character grabs the suspect (not a CPU!).
- Important announcements (such as arrest warrants) can be heard anywhere in the city, and any such announcements wait a little longer after previous dialogue has finished.
- Increased chance of surviving death as a cyborg cop if it has never happened to you before (including paying mobile users who started as a cop instead of being promoted).
- Robotic parts are not bulletproof vs water or other liquids.
- Improved collision detection on stomps or ground grapples from taller people.
- Tied arms don't transition into a Tiger Suplex if the victim is supposed to be under arrest.
- Seated grabs don't snatch from other people.
- Restoring default or back-up characters no longer spawns civilians inside the prison.
- Intruders are more likely to tunnel up through the ground - especially when breaking into or out of prison!

- The controller button you use to unpause is disregarded in the game itself (i.e. always picking up on Switch!).
- The opacity of virtual buttons is optional as well as the size.

v1.0.8

- Mysteries can be triggered when you answer the phone, where "Guess Who?" style clues help you figure out who to confront (by grappling and then taunting like an arrest).
- New major incidents include bomb threats!
- In rare situations, crime can become legal for one day under a Purge style "Immune System"!
- Yet more cybernetically enhanced costumes include a Judge Dredd style helmet and a Terminator style robotic mask! These only become available once you have experienced becoming a cyborg.
- Body Pattern #41 now includes a police badge, which is also available on the shoulder at Elbow Pad #24.
- New taunts include "Goosebumps" and the "Milk America Great Again" dance.
- New "Transparent 4" hairstyle works as a toupee.
- Improved consistency in the colouring of transparent hair length and fringes.
- Parents are called "Mum" or "Dad" by their children.
- Prevented an issue that caused prisoners to return to their cell at the wrong level in the new North Block.
- Fewer cops descend on you at the same time to avenge a colleague's death.

v1.0.7

- Additional dialogue to explain how you survived death - including police officers coming back as bulletproof cyborgs! Upon unlocking this privilege, these robotic body parts also appear in the editor.
- New "Robogun" weapon.
- Removed game console prop because Nintendo can't take a compliment.
- Changing the venue in Fight Scenes only resets "Standard" furniture/prop selections, so unique settings remain intact.
- Prison cells aren't favoured so heavily for weapon locations in larger blocks like the North or South.
- Cops are less likely to cite their ever-present colleagues as a reason to be afraid in fights.
- Offspring cost you a maximum of $100, which is only ever paid to mothers you are in a good relationship with.
- Slight changes to the default characters.

v1.0.6

- The wrestling arena no longer inherits the structure of a prison!
- Characters/objects that were stuck in the old prison structure have their position updated.
- Less bumpy balcony falls.
- Better view to set up Cafeteria fight scenes.
- The default Fight Scene camera remains more like the roaming camera in single player mode.
- Swapping hands while seated no longer risks crashing.

- Medical suggestions are much less common.
- Updated Steam Workshop mod launcher.

v1.0.5

- Alternate designs for each prison block include the classic tiers in the north and more of an open-plan square in the south!
- Improved camera logic works harder to prevent getting stuck in one cell while trying to see inside another.
- Bribed officers release their hold properly as well as cancelling the warrant.
- Prevented a rare issue that may have caused the game to crash when an object is thrown at someone and blocked.
- Louder thud when landing from a height.
- Jumping has a lower failure rate at lower heights.
- Prevented glitching through scenery by jumping or rolling.
- You don't automatically sleep on a bed if you're angry/hyperactive or pressing any other command.
- CPU characters stay asleep during the night regardless of their energy levels.
- Nervous breakdowns can no longer occur at the editor screen!
- Wearing multiple prison tops paints the prison number onto the correct one.
- Hammerlocks don't transition into a Tiger Suplex if the victim is supposed to be under arrest.
- Using a chainsaw still damages your mental health but half as quickly.
- You can't fire a rifle in a missing right hand, or a slingshot in a missing left hand, etc.
- Fight Scene exits are optional under the "Rules" tab.
- Fight Scene combatants can start anywhere in an arena instead of clustered together, and humans aren't automatically assigned an opponent.
- Only Fight Scenes let you take control of a CPU character by touching their meter.
- Prison blocks default to "slightly dark" lighting in Fight Scenes, and with more props.
- Slight changes to the default characters.

v1.0.4

- New "Riot Shield" weapon allows you to block 95% of attacks! Other large objects are also better for defence.
- Helmets and bullet-proof vests offer up to 90% protection from bullets, and wearing such a vest is considered to be "impersonating" a police officer.
- New headwear includes a combat helmet and an improved beret, which doesn't lose its black base when the colour is changed.
- Wider range of improved gunshot sounds.
- Prevented a rare issue where PC installations somehow start with NONE of the characters unlocked to use?! The game no longer fails to "Play" in such instances.
- The "Fight Scene" and "Editor" options are hidden from PC/Switch players who have not yet unlocked those privileges to prevent any accusations of it being a "bug".
- Your chosen water level never drains away in Fight Scenes.
- The lockdown schedule can change over time!
- The frequency of dialogue & arrests is now optional.
- Dialogue is less likely to be delivered in a violent situation.
- Asking to restore a limb works properly.
- Using somebody else's cell as a toilet risks their criticism!
- You can be questioned about what's hidden in your cell or a backpack.

- There's a chance that sleeping next to someone will be well received.
- Other people can ask you to take the blame for their crimes (and vice versa) - especially within gangs.
- Fatalities you're already wanted for aren't announced as if they're a mystery.
- Passing out while wanted is considered a sufficient punishment.
- Fewer police on the scene at the same time for no reason, and fewer visitors to your home except family.
- Stats are harder to improve by scoring baskets.
- Prisoners are forbidden to be released while they still have debts or outstanding warrants.

v1.0.3

- Steam Workshop support opens up the possibility of PC mods.
- Older Android devices no longer suffer from "yellow bars" in the display, but that also means they can no longer change the screen colour in the camera options.
- On a controller, the character selection screen has shoulder button prompts for the filters & pages.
- Mobile users are prompted to tap a character twice to select them in case they have no common sense.
- You can no longer step onto the police station's visitor counter unless the window is broken.
- You aren't asked to move furniture that already exists in the destination (i.e. from one prison block to another).
- You aren't asked to "craft something" out of a backpack (which isn't yet possible).
- You can spam projectiles for longer before you're forced to reload.
- Chained prisoners can't be accused of "trespassing".
- You can't give things to handcuffed people.
- Dead people can no longer serve as judges!
- Intimidation turns the victim into an enemy wherever possible, and cannot be used on the same person more than once a day.
- You can't sleep while having an adrenaline rush or a nervous breakdown.

v1.0.2

- New missions involve delivering furniture, smashing furniture, and gaining/losing weight.
- Missions may ask that something be delivered to a specific cell.
- An extreme punishment involves having your limbs cut off!
- People with no legs are encouraged to go to hospital to restore them.
- Dying fades more gradually into the Hall Of Fame with melancholy music.
- Headless people are always assumed to be dead (and are properly eliminated from fight scenes).
- Gun fatalities are correctly attributed to the shooter.
- Discovered dead bodies are less likely to result in your arrest unless they were witnessed at the time.
- Deceased characters can no longer appear as jurors (and therefore no longer get revived!).
- Only changing a character's role from "Deceased" restores their missing limbs in the editor.

- The game no longer crashes when somebody wears multiple layers that could have prison numbers written on them. Only the top layer qualifies while the underneath layer can be painted any colour.
- Prison costume overrides can be previewed in the editor as soon as you navigate away from the "Costumes" tab or change their home block.
- Abusing the wristband layer to access an upper arm sleeve still paints it the correct prison colour.
- Hypocritical arrests are no longer criticized repeatedly.
- Wardens are less likely to be accused of "assaulting" or "robbing" a wanted criminal (although it's not impossible to be accused of going too far).
- "Assault" charges are escalated to "Murder" if the victim dies later.
- Arresting officers no longer lose the weapons they were carrying after a court case.
- Detentions are longer and enforced more strictly, but detained prisoners aren't asked to go anywhere else.
- Nobody knows where people in parts unknown ("Location 0") are when asked.
- You cannot spam sleep to fast-forward time when you're full of energy.
- It's forbidden to change your facial structure if you don't have hundreds of dollars to pay for the surgery.
- Flying/falling over the prison lockers is more likely to land you back into the middle.
- Phones vibrate more to be visible from a distance.
- Wardens can be criticized for sleeping at work instead of at home!
- Computers can reveal info about other characters depending on the hacker's "Skill" (especially if you are looking for them).
- Civilians that get stuck inside the prison (i.e. fired officers) are no longer prevented from leaving (access is only blocked from the outside).
- Jumping (or stepping) into the police station windows no longer glitches through them.
- Looking at a prisoner helps to chase them out of a location (or into their cell) to lock it down.
- New arcade cabinet design & picture art.
- Objects don't always return to the exact same place they were taken from.
- Rain is rendered properly on Android (and more efficiently on all other platforms).
- Washing in a sink cleans all limbs instead of just the hands (but half as quickly as a shower would).
- Restored the risk of a bad reaction to alcohol.
- Adrenaline rushes boost your health.
- Generated characters reset any lost limbs instead of inheriting them.
- Slight changes to the default characters (with more realistic ages).
